### Annual Progress Report

Substances for which toxic substance reduction plans have been prepared:

Substance	CASRN
Ammonia (total)	NA - 16
Peracetic acid (and its salts)	79-21-0
Sulphuric Acid	7664-93-9
Particulate Matter (PM10)	NA - M09
Particulate Matter (PM2.5)	NA - M10

#### Plan Objectives

The reduction of toxic substance use, creation and releases is a priority for Cargill forming part of their sustainability programs and EMS. Our goal is to reduce the use and release of Ammonia (total), Sulphuric Acid, Peracetic Acid, Particulate Matter ≤10 microns (PM10), and Particulate Matter ≤2.5 microns (PM2.5) where technically and economically feasible for these substances. At the present time there are no reduction options that are both technically and economically feasible for these substances. However, Cargill will continue to explore new options as they arise as part of our sustainability programs.

#### Toxics Reduction Progress

Overall the quantity of ammonia used remained the same as last year and the quantities of PM10 and PM2.5 created and released by the facility increased due to an increase in the total hours of operation of the facility. The quantity of Peracetic Acid used decreased due to a decrease in the use of the product sanitizers containing this substance.

#### Plan Implementation Progress

At the present time there are no reduction options that are both technically and economically feasible for these substances. However, Cargill will continue to explore new options as they arise as part of their sustainability programs.

As there were no anticipated reductions noted in each of the plans for the toxic substances noted above, there were no reductions of any toxic substances during the reporting period that would be attributable to any reduction plan.
