Annual Progress Report

Substances for which toxic substance reduction plans have been prepared:

| Substance | CASRN |
|----------------------------|----------|
| Styrene | 100-42-5 |
| Cobalt (and its compounds) | NA - 05 |

Plan Objectives

The reduction of toxic substance use, creation and releases is a priority for Hyundai forming part of their sustainability programs and EMS. Their goal is to reduce the use and release of Styrene and Cobalt where technically and economically feasible. No technically and economically feasible reduction options for reducing these substances were identified. However, Hyundai will continue to monitor new technological advancements to ensure that reduction options that are both technologically and financially viable are implemented at their facility.

Toxics Reduction Progress

Quantities of Styrene and Cobalt used and contained in product increased when compared with the previous reporting period due to an increase in production at the site resulting from the addition of a second production line. Note that Ontario Regulation 127/01 was revoked as of December 31, 2019 and reporting of Acetone is no longer required.

Plan Implementation Progress

There were no reduction options identified in any of the plans for the above noted substances that were identified as being both technically and economically feasible. As such, there were no timelines presented in the reduction plans for the above noted substances. However, Hyundai will continue to explore and investigate potential reduction options as they arise as part of their sustainability program.

As there were no anticipated reductions noted in each of the plans for the toxic substances noted above, there were no reductions of any toxic substances during the reporting period that would be attributable to any reduction plan.
