Plan Objectives

All employees at Ingot Metal Company will be involved in the reduction of toxic substance use, creation and releases. Where technically and economically feasible, our goal is to reduce the creation of hexachlorobenzene and dioxin and furan isomers to the greatest extent possible. Ingot Metal Company has looked into all the options and currently found none to be feasible at this time. The facility will continue to monitor technological advancements to ensure that reduction options that are both technological and financially viable are implemented at our facility. In terms of the metal species noted above, Ingot Metal Company cannot reduce the use of these substances as they are integral components of the alloys produced by the facility. However, we will ensure the sound management and use of these substances that minimizes significant adverse impacts on human health and the environment.

Toxics Reduction Progress

Variations in the reported quantities have been observed in several categories including quantity created, contained in product, recycled and released to air. In the case of used and contained in product, variations are due to the changes to the quantity of specific alloys produced by the facility. In the case of quantity created and released to air, variations are due to the increase in the total scrap received and processed by the facility. Changes in the quantities of materials recycled are due to increases in the amount of furnace slag and baghouse dust shipped off-site for recycling.

Plan Implementation Progress

There were no reduction options identified in any of the plans for the above noted substances that were identified as being both technically and economically feasible. As such, there were no timelines presented in the reduction plans for the above noted substances. However, Ingot Metal Company will continue to explore and investigate potential reduction options as they arise as part of their sustainability program.

As there were no anticipated reductions noted in each of the plans for the toxic substances noted above, there were no reductions of any toxic substances during the reporting period that would be attributable to any reduction plan.

Certification Statement

As of June 1, 2020, I certify that I have read the reports on the toxic substance reduction plans for the substances noted below and am familiar with their contents and to my knowledge the information contained in the reports is factually accurate and the reports comply with the Toxics Reduction Act, 2009 and Ontario Regulation 455/09 (General) made under the Act.
