Annual Progress Report - Calendar 2019

Substances for which toxic substance reduction plans have been prepared:

Substance	CASRN
Phosphorus	7723-14-0

Plan Objectives

Jones Feed Mills is unable to reduce the use of Phosphorus as it is an integral feed additive that is necessary to meet the phosphorus requirements for animal production: to ensure optimal growth, fertility and bone development. Phosphorus cannot be manufactured or destroyed, and there is no substitute or synthetic version of it available. However, they will ensure the sound management and use of this substance that minimizes significant adverse impacts on human health and the environment.

Toxics Reduction Progress

Increases in the quantity of phosphorus used, released to air and contained in product are due to an increase in the overall annual production at the facility in 2019 relative to 2018.

Plan Implementation Progress

There were no reduction options identified in any of the plans for the above noted substances that were identified as being both technically and economically feasible. As such, there were no timelines presented in the reduction plans for the above noted substances. However, Jones Feed Mills will continue to explore and investigate potential reduction options as they arise as part of their sustainability program.

As there were no anticipated reductions noted in each of the plans for the toxic substances noted above, there were no reductions of any toxic substances during the reporting period that would be attributable to any reduction plan.
